**gradient descent wikipedia** Dec 19 2021 gradient descent is based on the observation that if the multi variable function is defined and differentiable in a neighborhood of a point then decreases fastest if one goes from in the direction of the negative gradient of at it follows that if for a small enough step size or learning rate then in other words the term is subtracted from because we want to

**intersymbol interference wikipedia** Feb 09 2021 one of the causes of intersymbol interference is multipath propagation in which a wireless signal from a transmitter reaches the receiver via multiple paths the causes of this include reflection for instance the signal may bounce off buildings refraction such as through the foliage of a tree and atmospheric effects such as atmospheric ducting and ionospheric reflection

**phase shift keying wikipedia** Nov 18 2021 phase shift keying psk is a digital modulation process which conveys data by changing modulating the phase of a constant frequency reference signal the carrier wave the modulation is accomplished by varying the sine and cosine inputs at a precise time it is widely used for wireless lans rfid and bluetooth communication any digital modulation scheme

[analog signal processing wikipedia](#) Sep 16 2021 tools used in analog signal processing a system s behavior can be mathematically modeled and is represented in the time domain as  $h(t)$  and in the frequency domain as  $H(s)$  where  $s$  is a complex number in the form of  $\sigma + j\omega$  or  $\sigma + j\omega$  in electrical engineering terms electrical engineers use  $j$  instead of  $i$  because current is represented by the variable  $i$
