The Signs of a Savant Aug 01 2020 Every once in a while nature gives us insight into the human condition by providing us with a unique case whose special properties illuminate the species as a whole. Christopher is such an example. Despite disabilities which mean that everyday tasks are burdensome chores, Christopher is a linguistic wonder who can read, write, speak, understand and translate more than twenty languages. On some tests he shows a severely low IQ, hinting at ineducability, yet his English language ability indicates an IQ in excess of 120 (a level more than sufficient to enter university). Christopher is a savant, someone with an island of startling talent in a sea of inability. This book documents his learning of British Sign Language, casting light on the modularity of cognition, the modality neutrality of the language faculty, the structure of memory, the grammar of signed language and the nature of the human mind.

[Toxic Communities](#) Jul 20 2019 From St. Louis to New Orleans, from Baltimore to Oklahoma City, there are poor and minority neighborhoods so beset by pollution that just living in them can be hazardous to your health. Due to entrenched segregation, zoning ordinances that privilege wealthier communities, or because businesses have found the 'paths of least resistance,' there are many hazardous waste and toxic facilities in these communities, leading residents to experience health and wellness problems on top of the race and class discrimination most already experience. Taking stock of the recent environmental justice scholarship, Toxic Communities examines the connections among residential segregation, zoning, and exposure to environmental hazards. Renowned environmental sociologist Dorceta Taylor focuses on the locations of hazardous facilities in low-income and minority communities and shows how they have been dumped on, contaminated and exposed. Drawing on an array of historical and contemporary case studies from across the country, Taylor explores controversies over racially-motivated decisions in zoning laws, eminent domain, government regulation (or lack thereof), and urban renewal. She provides a comprehensive overview of the debate over whether or not there is a link between environmental transgressions and discrimination, drawing a clear picture of the state of the environmental justice field today and where it is going. In doing so, she introduces new concepts and theories for understanding environmental racism that will be essential for environmental justice scholars. A fascinating landmark study, Toxic Communities greatly contributes to the study of race, the environment, and space in the contemporary United States.

Lives of the Signers of the Declaration of Independence Sep 26 2022 The fifty-six signers of America's Declaration of Independence risked their "lives, fortunes, and sacred honor" to found a new country. In this classic work, Benson J. Lossing describes the lives of each of the founding fathers, their greatest achievements, and what impelled them to take such an incredible risk. While some are well known to us - Thomas Jefferson, Benjamin Franklin, John Hancock - much of the pleasure in this book comes from reading about the lesser-known signers, and about the many challenges they faced throughout their lives in the young United States. Appendices contain Thomas Jefferson's original version of the Declaration, an analysis of its grievances, the subsequent Articles of Confederation and US Constitution, and the offending Stamp Act. This ebook edition includes an active table of contents, reflowable text, and 50 period engravings of the faces and signatures of the signers.
