designed and used in improving users' decision making in dynamic tasks. This book is divided into four major parts. Part I serves as an introduction to the subject of "decision making in dynamic tasks", its importance and its complexity. Part II provides background material, drawing upon the relevant literature, for the development of an integrated process model on the effectiveness of human facilitated ILEs in improving decision making in dynamic tasks. Part III focuses on the design, development and application of Fish Bank ILE, in laboratory experiments, to gather empirical evidence for the validity of the process model. Finally, part IV presents a comprehensive analysis of the gathered data to provide a powerful basis for understating important phenomena of training with human facilitated simulation-based learning environments, thereby, help to drive critical lessons to be learned. contributions to the field of measurement, a second and related purpose is to provide a useful resource. We believe that the combination of the developmental history and theory of the method, the examples of its use in practice, some possible future directions, and software and data files will make this book a valuable resource for teachers and scholars of the Rasch method. This book is a tribute to Professor John P Keeves for the advocacy of the Rasch model in Australia. Happy 80th birthday John! xii There are good introductory texts on Item Response Theory, Objective Measurement and the Rasch model. However, for a beginning researcher keen on utilising the potentials of the Rasch model, theoretical discussions of test theory and associated indices do not meet their pragmatic needs. Furthermore, many researchers in measurement still have little or no knowledge of the features of the Rasch model and its use in a variety of disciplines.

This book attempts to describe the underlying axioms of test theory, and, in particular, the concepts of objective measurement and the Rasch model, and then link theory to practice. We have been introduced to the various models of test theory during our graduate days. It was time for us to share with those keen in the field of measurement in education, psychology and the social sciences the theoretical and practical aspects of objective measurement.

How to Design Questions and Tasks to Assess Student Thinking Aug 05 2020 With new standards emphasizing higher-order thinking skills, students will have to demonstrate their ability to do far more than simply remember facts and procedures. But what's the best way for teachers to ensure that students have such skills? In this highly accessible guide, author Susan M. Brookhart shows how to do just that, by providing specific guidelines for designing targeted questions and tasks that align with standards and assess students' ability to think at higher levels. Aided by dozens of examples across grade levels and subject areas, readers will learn how to

This handbook adds a valuable contribution to the much-needed literature on people-related aspects in software engineering. The primary focus is on the particular challenge of extending software process definitions to more explicitly address people-related considerations. The capability concept is not present nor has it been considered in most software process models. The authors have developed a capabilities-oriented software process model, which has been formalized in UML and

growing concerns about educational testing in America. Drawing on research and the experiences of leading states and countries, this new book examines how performance assessments can offer a feasible alternative to current high stakes tests. As parents, educators, and policymakers have increasingly criticized the effects of the teaching to the test mandate from the No Child Left Behind Act, the need for this resource has never been more critical. This summary volume to Beyond the Bubble Test speaks to the nationwide unease about current tests' focus on low-level skills, like recalling and restating facts, rather than higher-order skills such as problem-solving, analyzing, and synthesizing information. It illustrates how schools can use authentic assessments to improve teaching and learning as they involve students in conducting research, designing investigations, developing products and solutions, using technology, and

Understanding and Using Reading Assessment, K-12. Using the CURRV model to evaluate reading assessment methods—including reading inventories, teacher questioning, performance assessment, and high-stakes reading tests—Afflerbach considers the consequences and usefulness of each method, the roles and responsibilities of key stakeholders, and the reliability and validity of the assessments. In addition, he examines four important but often overlooked aspects of reading assessment:

- Assessment accommodation for English-language learners and students with special needs
- Assessment of noncognitive aspects of reading, such as motivation, engagement, self-concept, and self-efficacy
- The use of formative and summative assessment
- The importance of self-assessment in building reading independence
