Death on the Move Oct 28 2022 This volume explores the different aspects of the management of death, dying and mortality by migrants in Southern Europe, through deconstructing persistent idiosyncratic beliefs, myths, narratives, silences, and constraints. It focuses on migrants from diverse geographical and cultural backgrounds in Portugal, Spain and Italy. It also includes reflections on Madagascar, Guinea-Bissau, East-Timor and Cuba. The thirteen chapters provide insights into epistemological issues, the trans-national circulation of bodies, spirits and rituals, migration, the placing of the dead and diverse funerary practices and

perspectives. Privileging a multi-sited approach to death and migrations, this book draws on oral, archival and published sources to give visibility to populations that often live in liminal structural positions and transient worlds. By exploring the multifaceted dimensions of death and suffering among immigrant populations, it refocuses the debate on migration in Europe and beyond by highlighting under-researched issues such as end-of-life care, mental health, death, burial, cremation, funerary ceremonies and symbols, repatriation and martyrdom.

Memory and Punishment Nov 24 2019 This book examines the criminalisation of denials of genocide and of other mass atrocities in Europe and discusses the

implications of protecting institutional historical memory through criminal law. The analysis highlights the tensions with free speech, investigating the relationship between criminal law and historical memory. The book paves the way for a broader discussion about fake news, 'post-truth' scenarios, and free expression in a digital world. The author underscores the need to protect well-founded factual records from the dangers of misinformation. Historical denialism and the related jurisprudence represent a key step in exploring this complex field. The book combines an interdisciplinary approach with criminal law methodology. It is primarily aimed at academics, practitioners and others who wish to deepen their understanding of historical denialism, remembrance laws, 'speech crimes' and freedom of expression. Emanuela Fronza is Senior Research Fellow in Criminal Law and Lecturer in International and European Criminal Law at the School of Law, University of Bologna. She is a Principal Investigator within the EU research consortium Memory Laws in European and Comparative Perspectives funded by HERA (Humanities in the European Research Area).

Fluoroplastics, Volume 1 Dec 26 2019 Fluoroplastics, Volume 1, compiles in one place a working knowledge of the polymer chemistry and physics of non-melt processible fluoropolymers with detailed descriptions of commercial processing methods, material properties, fabrication and handling information, technologies, and applications. Also, history, market statistics, and safety and recycling aspects are covered. Both volumes contain a large amount of specific property data which is useful for users to readily compare different materials and align material structure with end use applications. Volume 1 concentrates mostly on polytetrafluoroethylene and polychlorotrifluoroethylene and their processing techniques – which are essentially non-melt-processes – used across a broad range of industries including automotive, aerospace, electronic, food, beverage, oil/gas, and medical devices. Since the first edition was published many new technical developments and market changes have taken place and new grades of materials have entered the market. This new edition is a thoroughly updated and significantly expanded revision

covering new technologies and applications, and addressing the changes that have taken place in the fluoropolymer markets. Fluoroplastics, Volume 1 is an all-encompassing handbook for non-melt processible fluoropolymers – a unique and invaluable reference for professionals in the fluoropolymer industry and fluoropolymer application industries. Exceptionally broad and comprehensive coverage of non-melt processible fluoropolymers processing and applications. Practical approach, written by long-standing authority in the fluoropolymers industry. New technologies, materials and applications are included in the new edition.

Electromagnetic Fields in Biology and Medicine Oct 24 2019 Through a biophysical approach, Electromagnetic Fields in Biology and Medicine provides state-of-the-art knowledge on both the biological and therapeutic effects of Electromagnetic Fields (EMFs). The reader is guided through explanations of general problems related to the benefits and hazards of EMFs, step-by-step engineering processes, and basic results obtained from laboratory and clinical trials. Basic biological mechanisms reviewed by several authors lead to an understanding of the effects of EMFs on microcirculation as well as on immune and

anti-inflammatory responses. Based upon investigational mechanisms for achieving potential health benefits, various EMF medical applications used around the world are presented. These include the frequent use of EMFs in wound healing and cartilage/bone repair as well as use of EMFs in pain control and inhibition of cancer growth. Final chapters cover the potential of using the novel biophysical methods of electroporation and nanoelectroporation in electrochemotherapy, gene therapy, and nonthermal ablation. Also covered is the treatment of tendon injuries in animals and humans. This book is an invaluable tool for scientists, clinicians, and medical and engineering students.

Gaining Currency Jan 19 2022 In *Gaining Currency*, leading China scholar Eswar S. Prasad describes how the renminbi (RMB) is taking the world by storm and explains its role in reshaping global finance. This book sets the recent rise of the RMB, China's currency since 1949, against a sweeping historical backdrop. China issued the world's first paper currency in the 7th century. In the 13th century, Kublai Khan issued the first-ever currency to circulate widely despite not being backed by commodities or precious metals. China also experienced some of the earliest episodes of hyperinflation currency wars. *Gaining Currency* reveals the interconnections linking China's growing economic might, its expanding international influence, and the rise of its currency. If China plays its cards right by adopting reforms that put its economy and financial markets on the right track, the RMB could rival even the euro and the Japanese yen. Prasad shows, however, that while China has successfully adopted a unique playbook for promoting the RMB, many pitfalls lie ahead for its economy and currency that could limit the RMB's ascendance. The Chinese leadership is pursuing financial liberalization and limited market-oriented reforms, but it has unequivocally repudiated political, legal, and institutional reforms. Therefore, Prasad argues, while the RMB is likely to become a significant reserve currency, it will not attain "safe haven" status as a currency to

which investors turn during crises. In short, the hype predicting the RMB's inevitable rise to global dominance is overblown. Gaining Currency makes a compelling case that, for all its promise, the RMB does not pose a serious challenge to the U.S. dollar's dominance in international finance.

The Vestibular System in Cognitive and Memory Processes in Mammals Jul

25 2022 Since the beginning of life, all plant and animal kingdoms have been developed or modified based on gravity along with atmospheric composition and solar radiation existing on Earth. Gravity is mainly encoded by the otolithic sensors of the vestibular system but its role has been largely underestimated in favor of the vestibular semicircular canals and reduced to oculomotor and postural coordination. Over the last decade, it has been demonstrated that sensory information provided by the vestibular system is crucial in spatial-memory processes in rats and humans. More recently a role in attention processes has been raised. This topic aims to report and demonstrate the role and integration of vestibular information in cognitive processes in rodent models and human at the behavioral, imaging and electrophysiological levels.

ICPMG2014 - Physical Modelling in Geotechnics Sep 27 2022 The 8th International Conference on Physical Modelling in Geotechnics (ICPMG2014) was organised by the Centre for Offshore Foundation Systems at the University of Western Australia under the auspices of the Technical Committee 104 for Physical Modelling in Geotechnics of the International Society of Soil Mechanics and Geotechnical Engineering. This quadrennial conference is the traditional focal point for the physical modelling community of academics, scientists and engineers to present and exchange the latest developments on a wide range of physical modelling

aspects associated with geotechnical engineering. These proceedings, together with the seven previous proceedings dating from 1988, present an inestimable collection of the technical and scientific developments and breakthroughs established over the last 25 years. These proceedings include 10 keynote lectures from scientific leaders within the physical modelling community and 160 peer-reviewed papers from 26 countries. They are organised in 14 themes, presenting the latest developments in physical modelling technology, modelling techniques and sensors, through a wide range of soil-structure interaction problems, including shallow and deep foundations, offshore geotechnics, dams and embankments, excavations and retaining structures and slope stability. Fundamental aspects of earthquake engineering, geohazards, ground reinforcements and improvements, and soil properties and behaviour are also covered, demonstrating the increasing complexity of modelling arising from state-of-the-art technological developments and increased understanding of similitude principles. A special theme on education presents the latest developments in the use of physical modelling techniques for instructing undergraduate and postgraduate students in geotechnical engineering.

Sea Level Variability and Change Aug 26 2022 In June 2015 we held a workshop on the beautiful island of Mallorca, Spain with a focus on sea level variability and change. Over 120 sea level experts from around the world attended this workshop,

from a range of different disciplines. The main aims of the workshop were to: 1.) Evaluate the current state-of-knowledge of sea level science; 2.) Identify gaps and unresolved questions in any aspect of sea level science; and 3.) Design future research to address these issue. All aspects of sea level changes were covered, from global to regional, observations and modelling, processes driving mean sea level changes and extremes, from the geological scale to the instrumental era and future projections and including impacts on the coastal zones. This E-Book presents papers that came out of that workshop. Overall, these papers illustrate the multi-disciplinary nature of sea level research, cross-cutting many fields of research including: oceanography, meteorology, geology, coastal morphodynamics, engineering and the social-economic aspects. Collectively, theses articles represent an interesting range of perspectives and original studies that contribute to understanding the dynamic nature of sea level and its impacts across a wide range of time and space scales. Enjoy reading them!
