Exploratory Data Analysis Using Fisher Information Oct 26 2019 This book uses a mathematical approach to deriving the laws of science and technology, based upon the concept of Fisher information. The approach that follows from these ideas is called the principle of Extreme Physical Information (EPI). The authors show how to use EPI to determine the theoretical input/output laws of unknown systems. Will benefit readers whose math skill is at the level of an undergraduate science or engineering degree.

Recent Advances in the Biology, Therapy and Management of Melanoma Jul 04 2020 The book *Recent Advances in the Biology, Therapy and Management of Melanoma* brings up-to-date information regarding a number of aspects which culminate in illuminating potential targets in the fight against melanoma. This book is intended to be a reference book for both the scientific and clinical communities and brings complicated subject matter together in an easy, readable way. Undoubtedly fundamental scientific understanding has to then be translated to the clinic in order for us to make significant strides in eradicating melanoma. It is hoped that scientists, clinicians, students and residents find this book useful in their studies on melanoma and that it not only expands their perspectives and views on the field, but challenges them to forge ahead towards discovering the ultimate cure.

Magnetic Properties of Paramagnetic Compounds, Magnetic Susceptibility Data, Volume 3 Aug 24 2019 With the objective to collate the enormous amount of information on magnetic susceptibility parameters of a very large number of a variety of skeletons and present it in a form that can readily be retrieved and used, a new pattern is being introduced with the present volume keeping in view that now a majority of research groups look at the scientific data electronically. Volume 1 covers, magnetic properties of Y, La, Ti, Zr, V, Cr, Mo, W, Mn, Re, and Fe; Volume 2 covers complexes of Fe, Ru, Co, and Rh; and Volume 3 covers complexes of Ni, Pd, Pt, Ce, Pr, Nd, Sm, Eu, Gd, Tb, Dy, Ho, Er, Tm, Yb, Lu, Th, and U. All the magnetic properties of each individual substance are listed as a single document which is self-explainable and allowing search in respect of substance name, synonyms, common vocabulary, and even structure.

Towards translating research to clinical practice: Novel Strategies for Discovery and Validation of Biomarkers for Brain Injury Jan 28 2020 Traumatic brain injury (TBI) is a major cause of death and disability and one of the greatest unmet needs in medicine and public health. TBI not only has devastating effects on patients and their relatives but results in huge direct and indirect costs to society. Although guidelines for the management of patients have been developed and more than 200 clinical trials have been conducted, they have resulted in few improvements in clinical outcomes and no effective therapies approved for TBI. It is now apparent that the heterogeneity of clinical TBI is underlain by molecular phenotypes more complex and interactive than initially conceived and current approaches to the characterization, management and outcome prediction of TBI are antiquated, unidimensional and inadequate to capture the interindividual pathophysiological heterogeneity. Recent advances in proteomics and biomarker development provide unparalleled opportunities for unraveling substantial injury-specific and patient-specific variability and refining disease characterization. The identification of novel, sensitive, objective tools, referred to as biomarkers, can revolutionize pathophysiological insights, enable targeted therapies and personalized approaches to clinical management. In this Research Topic, we present novel approaches that provide an infrastructure for discovery and validation of new biomarkers of acute brain injury. These techniques include refined mass spectrometry technology and high throughput immunoblot techniques. Output from these approaches can identify potential candidate biomarkers employing systems biology and data mining methods. In this Research Topic, we present novel approaches that provide an infrastructure for discovery and validation of new biomarkers of acute brain injury. These techniques include refined mass spectrometry technology and high throughput immunoblot techniques. Output from these approaches can identify potential candidate biomarkers employing systems biology and data mining methods. Finally, suggestions are provided for the way forward, with an emphasis on need for a multidimensional approach that integrate a panel of pathobiologically diverse biomarkers with clinical variables and imaging-based assessments to improve diagnosis and classification of TBI and to develop best clinical practice guidelines.

Ferri's Clinical Advisor 2018 E-Book Jul 24 2019 Ferri's Clinical Advisor 2018 is the most efficient, intuitive, and thorough resource of its kind, trusted by physicians to provide current diagnosis and treatment recommendations for hundreds of common medical conditions. The renowned "5 books in 1" format organizes vast amounts of data in a user-friendly, accessible manner, allowing quick retrieval of essential information. You'll find guidance on diseases and disorders, differential diagnoses, and laboratory tests— updated annually by experts in key clinical fields. Medical algorithms and clinical practice guidelines round out the core content. Updated content by experts in key clinical fields helps you keep pace with the speed of modern medicine. Popular "5 books in 1" format includes cross-references, outlines, bullets, tables, boxes, and algorithms to help expedite search. Features 30 all-new topics, including Zika virus, hepatitis E, asthma-COPD overlap syndrome, drug-induced parenchymal lung disease, binge eating disorder, hereditary breast and ovarian cancer syndrome, transient global amnesia, and more. Updates 900 topics with the latest developments in medicine over the past year. Contains significantly expanded coverage throughout, including nearly 200 new illustrations, more than 100 new tables and boxes, 50 new differential diagnoses, and 30 new algorithms.

The Theory of Transformations in Metals and Alloys Feb 08 2021 This work is a classic reference text for metallurgists, material scientists and crystallographers. The first edition was published in 1965. The first part of that edition was revised and re-published in 1975 and again in 1981. The present two-part set represents the eagerly awaited full revision by the author of his seminal work, now published as Parts I and II. Professor Christian was one of the founding fathers of materials science and highly respected worldwide. The new edition of his book deserves a place on the bookshelf of every materials science and engineering department. Suitable thermal and mechanical treatments will produce extensive rearrangements of the atoms in metals and alloys, and corresponding marked variations in physical and chemical properties. This book describes how such changes in the atomic configuration are effected, and discusses the associated kinetic and crystallographic features. It deals with areas such as lattice geometry, point defects, dislocations, stacking faults, grain and interphase boundaries, solid solutions, diffusion, etc. The first part covers the general theory while the second part is concerned with descriptions of specific types of transformations.
