Practical Ethics Apr 08 2021 A classic work in the field of practical and professional ethics, this collection of nine essays by English philosopher and educator Henry Sidgwick (1838-1900) was first published in 1898 and forms a vital complement to Sidgwick's major treatise on moral theory, *The Methods of Ethics*. Reissued here as Volume One in a new series sponsored by the Association for Practical and Professional Ethics, the book is composed chiefly of addresses to members of two ethical societies that Sidgwick helped to found in Cambridge and London in the 1880s. Clear, taut, and lively, these essays demonstrate the compassion and calm reasonableness that Sidgwick brought to all his writings. As Sidgwick explains in his opening essay, the societies he addressed aimed to allow academics, professionals, and others to pursue joint efforts at reaching "some results of value for practical guidance and life." Sidgwick hoped that members might discuss such questions as when, if ever, public officials might be justified in lying or in breaking promises, whether scientists could legitimately inflict suffering on animals for research purposes, when nations might have just cause in going to war, and a score of other issues of ethics in public and private life still debated a century later. This valuable reissue returns *Practical Ethics* to its rightful place in Sidgwick's oeuvre. Noted ethicist

Sissela Bok provides a superb Introduction, ranging over the course of Sidgwick's life and career and underscoring the relevance of Practical Ethics to contemporary debate. She writes: "Practical Ethics, the last book that Henry Sidgwick published before his death in 1900, contains the distillation of a lifetime of reflection on ethics and on what it would take for ethical debate to be 'really of use in the solution of practical questions.'" This rich, engaging work is essential reading for all concerned with the relationship between ethical theory and practice, and with the questions that have driven the study of professional ethics in recent years.

Similarly, the 24-problem sample exam (12 essay and 12 multiple-choice problems) is given, followed by step-by-step solutions to the exam. Engineers looking for a CE/PE review with problems and solutions will buy both books. Those who want only an elaborate set of exam problems, a sample exam, and detailed solutions to every problem will purchase this book. 100% problems and solutions.

ECEM - English for Civil Engineering Mastery Oct 14 2021 The book entitled ECCEM (English for Civil Engineering Mastery) as mentioned earlier is a reading-based ESP course book in professional English for Civil Engineering students. The book is so designed that students could succeed in acquiring the technical terminology through reading ESP texts. So, the primary purpose of the book is not to teach Civil Engineering to the students, but help them improve reading technical passages and develop a reading habit in their field of study. The course book includes eighteen units from general to specific and simple to complex. Each unit has a primary warm-up part along with various reading and vocabulary activities. The warm-up part is specifically designed to enable students to have oral discussions and debates prior to reading the actual texts. Reading activities urge students to read the text and then answer the questions given. A comprehension practice follows each passage and demands a comprehensive study of the text. In this part, vocabulary practice along with exercises and some other language activities are given for the purpose of motivating students to study technical vocabulary within the texts. Reading activities are designed to help students study the comprehension of the passages and vocabulary as well. In some units cloze tests are given relating to the same topic in the unit to check students' vocabulary comprehension. Each unit has also translation and writing parts: in the translation part, students are required to translate the given passage into Turkish as an assignment; in writing part, various writing topics, closely related to the reading passages, are assigned to students as in-class activities or as homework. Since this is an ESP course book in Civil Engineering, the main aim of the passages is to motivate students to use technical English in their own professional fields and to enable them to master necessary technical terminology. Throughout their professional lives, almost all of the Engineering students will need English both technically and professionally in order to communicate with foreign people and companies they are doing business with. The course book is mainly designed to be used in formal class sessions, but it can also be used by students and professionals of the field in self-study of the technical terminology. The design of the course book will enable students to learn new technical vocabulary and help them to comprehend technical passages with the aid of given almost 300 field-oriented vocabulary. The meanings of the new words are given as they are presented in the passages. That is to say, the contextual meanings of the vocabulary are given in the book. All in all, the book covers almost 400 exercises and various language study points. A Word to Learner: Discuss the given topics with your friends and make your own account of them Carefully study the pre- reading activities Make sure you study the topic – related technical vocabulary in

advance Try to find out other related meanings of the vocabulary from an English Dictionary of Civil Engineering Read the passages in advance and study accompanying questions given As thought useful in the acquisition of language skills, translate the given passages into your native language without paying attention to linguistic details of the passage; just try to make them understand by your colleagues Writing tasks are designed for your use and make sure that they should be written academically and pay attention to the instructions given as well A Word to Teacher: Remember most activities in the book are pre-assigned activities to be assigned to students prior to studying the units. Warm-up discussion part should be done with teacher ' s supervision in group, in pairs or individually. Pay attention to learners ' discussion technique; do not interrupt their conversation unless there is a communication failure. Encourage students to answer questions either orally or in writing. Make sure they use these questions to understand the passage better since they are text-related. In reading the text, let them first do a silent reading and then teacher can make a model reading. Make sure they understand the passage very well and encourage them to understand the passage after studying the vocabulary without referring to a dictionary. In reading activities, check their comprehension through given questions and related exercises. Assign them the cloze test. It is recommended less time be spent on this activity in class. Assign translation passages in advance and do not allocate more than 1 class hour for them in-class translation. Writing is also an important part of the unit, encourage students to write the assigned topics at home and discuss some students ' writing papers in class. Make sure feedback studies should be done after each unit and weak points are to be determined and additional studies can be done with students in class. In general, each unit can be allocated 6 hours in class study, but some units may take longer than this estimated time, so in designing the weekly/monthly or term lesson plans or programs, the time allocation can be taken into reconsideration as well.
