Health Economics Dec 17 2021 A textbook that combines economic concepts with empirical evidence to explain in economic terms how health care institutions and markets function. This book introduces students to the growing research field of health economics. Rather than offer details about health systems around the world without providing a theoretical context, Health Economics combines economic concepts with empirical evidence to enhance readers' economic understanding of how health care institutions and markets function. It views the subject in both microeconomic and macroeconomic terms, moving from the individual and firm level to the market level to a macroeconomic view of the role of health and health care within the economy as a whole. The book includes discussion of recent empirical evidence on the U.S. health system and can be used for an undergraduate course on U.S. health economics. It also contains sufficient material for an undergraduate or masters course on global health economics, or for a course on health economics aimed at health professionals. It includes a chapter on nurses as well as a chapter on the economics of hospitals and pharmaceuticals, which can be used in master's courses for students in these fields. It supplements its analysis with readings (both classic and current), extensive references, links to Web sites on policy developments and public programs, review and discussion questions, and exercises. Downloadable supplementary material for instructors, including solutions to the exercise sets, sample syllabuses, and more than 600 slides that can be used for class presentations, is available at http://mitpress.mit.edu/health_economics. A student solutions manual with answers to the odd-numbered exercises is also available.

An Introduction to Epistemology - Second Edition Aug 13 2021 The second edition of Jack Crumley's *An Introduction to Epistemology* strikes a balance between the many issues that engage contemporary epistemologists and the contributions of the major historical figures. He shows not only how philosophers such as Descartes, Hume, Locke, Berkeley, and Kant foreground the contemporary debates, but also why they deserve consideration on their own terms. A substantial revision of the first edition, the second edition is even more accessible to students. The new edition includes recent work on contextualism, evidentialism, externalism and internalism, and perceptual realism; as well, the chapter on coherence theory is substantially revised, reflecting recent developments in that area. New to this second edition is a chapter on feminist epistemology, which includes discussions of major positions and themes, such as feminist empiricism, feminist standpoint epistemology, postmodern epistemology, and feminist critiques of objectivity. It presents the important contributions of philosophers such as Sandra Harding, Helen Longino, Genevieve Lloyd, and others. Each chapter ends with a list of study questions and readings for further study.

The HM Learning and Study Skills Program Aug 01 2020 The HM Learning and Study Skills Program: Level II was designed to provide an introduction to learning and study skills for 8th, 9th, and 10th grade students through a series of activity-oriented units. It is structured on the assumption that an activity-oriented lesson is the most effective instructional strategy for the teaching of study skills: more succinctly, that “learning by doing” is the best way ‘study smart’. The Level II Teacher’s Guide includes a pretest, a wide variety of teaching suggestions, unit summaries, activities for retrieval and closure as well as teaching adaptations through the use of technology. It was published to help teachers assist students in the development of essential study skills and to reinforce their existing strategies that work. The Program supports academic independence for students that have a wide range of ability with college and career readiness as a tangible and realistic goal.
