*The Emergence of Start-ups* Jan 27 2020 In France, the number of young start-ups has soared since the beginning of the 2010s, leading the government to encourage their development and make France the “start-up nation”. This book contributes to a better understanding of the emergence of these companies by studying the influence of the ecosystem on their development and the modes of financing that they use. The financing of start-ups remains a major challenge insofar as they are often faced with refusal from the banks. Successful financing depends largely on the geopolitical and economic environment. Through a comparative study of models from both France and English-speaking countries, the authors explore possible financing solutions for France. It changed many of our certainties and practices, including the foundations of the market-led version of capitalism, by bringing social and health considerations back to the forefront of firms' considerations, investors' strategies and governments' priorities. Under the effects of this unprecedented crisis, all sectors of finance and real economy have been seriously affected. Health uncertainties and their increasing consequences for human life and activities require stronger and faster actions to shape pathways towards sustainability and better resilience. The COVID-19 health crisis is a visible part of a greater iceberg: the World Health Organization has tracked, over recent years, a large number of epidemic events around the world, suggesting that many other similar diseases could appear and evolve in the future from epidemic to pandemic in a globalized world. Financial Transformations Beyond the COVID-19 Health Crisis was specifically designed to provide the readers with new results, recent findings and future outlook on the impacts of COVID-19 on financial markets, firm behaviors, and finance and investment strategies. It favors multidimensional perspectives and brings together conceptual, empirical and policy-oriented chapters, using quantitative and qualitative methods alike. This is a timely and comprehensive collection of theoretical, empirical and policy contributions from renowned scholars around the world, and provides the thoughts and insights required to rethink the financial sector in the event of new shocks of the same nature.

Renters Win, Home Owners Lose Jul 13 2021 Home ownership has been widely regarded as the best financial investment in the pursuit of wealth accumulation. Americans believe that the appreciated value of a home provides a great hedge against inflation, giving homeowners an opportunity to make a profit when they sell the property. Today, two-thirds of American families own their homes. Nearly 80 percent of the 78 million baby boomers are homeowners. Many of them have bought and sold several homes. Yet close to 90 percent of American families are broke. Nothing consumes more of our hard-earned money than home ownership. What if this popular, best investment choice is nothing more than a dangerous dream? Is home ownership simply a huge economic scam designed to keep buyers broke? Could homeowners be working to

pay a mortgage that make their lenders rich while they stay poor? What if home equity is only an illusion? Could renters be in a better financial position than those who own their home? Renters Win, Homeowners Lose: Revealing The Biggest Scam In America is a bold approach in unraveling the long-term financial reality of home ownership in America. The book compares buying a home to renting and reveals that renters clearly have tangible, financial advantages over the majority of homeowners. Renters can truly be winners! Tables and models are used throughout the book to poignantly demonstrate that most homeowners receive no more than a zero percent return on their investment, and many lose money in the deal. Renters Win, Homeowners Lose: Revealing the Biggest Scam in America will get you to rethink the way you view home ownership versus renting. The book is a thought-provoking masterpiece.

Optimising Distressed Loan Books Jun 19 2019 The fundamental question posed by this book is why banks fail to maximize distressed loan collections where the distressed debt investor succeeds. The answer to this question is found in examination of the "Bank Arb. Trade"--the ability of sophisticated investors to uncover value, or arbitrage, in bank loan portfolios that the banks themselves simply miss or cannot realize.

Creditocracy Apr 10 2021 It seems like pretty much everybody -- homeowners, students, those who are ill and without health insurance, and, of course, credit card holders -- is up to their neck in debt that can never be repaid. 77% of US households are seriously indebted and one in seven Americans has been pursued by debt collectors. The major banks are bigger and more profitable than before the 2008 crash, and legislators are all but powerless to bring them to heel. In this forceful, eye-opening survey, Andrew Ross contends that we are in the cruel grip of a creditocracy -- where the finance industry commandeers our elected governments and where the citizenry have to take out loans to meet their basic needs. The implications of mass indebtedness for any democracy are profound, and history shows that whenever a creditor class becomes as powerful as Wall Street, the result has been debt bondage for the bulk of the population. Following in the ancient tradition of the jubilee, activists have had some success in repudiating the debts of developing countries. The time is ripe, Ross argues, for a debtors' movement to use the same kinds of moral and legal arguments to bring relief to household debtors in the North. After examining the varieties of lending that have contributed to the crisis, Ross suggests ways of lifting the burden of illegitimate debts from our backs. Just as important, Creditocracy outlines the kind of alternative economy we need to replace a predatory debt-money system that only benefits the 1%.
