text work so well for

answered given the function $g(x) = 4x^3 - 6x$ bartleby

Nov 19 2021 web transcribed image text given the
function $g(x) = 4x^3 - 6x$ find the first derivative $g'(x)$
 $g'(x) = 12x^2 - 6$ preview notice that $g'(x) = 0$ when $x = \pm \frac{1}{2}$ that is $g'(\pm \frac{1}{2}) = 0$ now
we want to know whether there is a local minimum
or local maximum at $x = \pm \frac{1}{2}$ will use the second derivative
test find the second derivative $g''(x) = 24x$ so we $g''(\pm \frac{1}{2}) = \pm 12$
preview evaluate $g(\pm \frac{1}{2}) = \pm \frac{1}{2}$
