*Recent Advances in Model Predictive Control*

Jan 06 2021 This book focuses on distributed and economic Model Predictive Control (MPC) with applications in different fields. MPC is one of the most successful advanced control methodologies due to the simplicity of the basic idea (measure the current state, predict and optimize the future behavior of the plant to determine an input signal, and repeat this procedure ad infinitum) and its capability to deal with constrained nonlinear multi-input multi-output systems. While the basic idea is simple, the rigorous analysis of the MPC closed loop can be quite involved. Here, distributed means that either the computation is distributed to meet real-time requirements for (very) large-scale systems or that distributed agents act autonomously while being coupled via the constraints and/or the control objective. In the latter case, communication is necessary to maintain feasibility or to recover system-wide optimal performance. The term economic refers to general control tasks and, thus, goes beyond the typically predominant control objective of set-point stabilization. Here, recently developed concepts like (strict) dissipativity of optimal control problems or turnpike properties play a crucial role. The book collects research and survey articles on recent ideas and it provides perspectives on current trends in nonlinear model predictive control. Indeed, the book is the outcome of a series of six workshops funded by the German Research Foundation (DFG) involving early-stage career scientists from different countries and from leading European industry stakeholders.

*A Guide to the Study and Use of Military History* Sep 21 2019 This Guide to the Study and Use of Military History is designed to foster an appreciation of the value of military history and explain its uses and the resources available for its study. It is not a work to be read and lightly tossed aside, but one the career soldier should read again or use as a reference at those times during his career when necessity or leisure turns him to the contemplation of the military past.

**Strategic Management Concepts** Jul 20 2019

STRATEGIC MANAGEMENT:

COMPETITIVENESS AND GLOBALIZATION,

7th edition provides the most accurate, relevant, and complete presentation of strategic management today. Each edition is thoroughly updated to include cutting edge research and trends that are shaping business strategy. The authors guide students through the strategic management process using a unique model that blends the classic industrial organizational model with the resource-based view of the firm to explain how firms use the strategic management process to build a sustained competitive advantage. Throughout the text carefully selected examples and highlights help put the ideas presented into context. The text's stunning four color design, illustrative models and figures also helps to focus students attention on the key points. Adopters of the concepts split can easily integrate their own case selections and readings from leading providers such as Harvard, Ivey, and Darden through Cengage Learning Custom Solutions. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. *Strategic Management* Jun 30 2020 Strategic Management: Competitiveness and Globalization, Cases, 5e consists of 35 cases representing a myriad of strategy topics and types of firms and industries. The authors have meticulously reviewed hundreds of cases to create this outstanding package.

**Recent Advances in Symbiosis Research: Integrative Approaches** Mar 20 2022

Traditionally, symbiosis research has been undertaken by researchers working independently of one another and often focused on a few cases of bipartite host-symbiont interactions. New model systems are emerging that will enable us to fill fundamental gaps in symbiosis research and theory, focusing on a broad range of symbiotic interactions and including a variety of multicellular hosts and their complex microbial communities. In this Research Topic, we invited researchers to contribute their work on diverse symbiotic networks, since there are a large variety of

symbioses with major roles in the proper functioning of terrestrial or aquatic ecosystems, and we wished the Topic to provide a venue for communicating findings across diverse taxonomic groups. A synthesis of recent investigations in symbiosis can impact areas such as agriculture, where a basic understanding of plant-microbe symbiosis will provide foundational information on the increasingly important issue of nitrogen fixation; climate change, where anthropogenic factors are threatening the survival of marine symbiotic ecosystems such as coral reefs; animal and human health, where unbalances in host microbiomes are being increasingly associated with a wide range of diseases; and biotechnology, where process optimization can be achieved through optimization of symbiotic partnerships. Overall, our vision was to produce a volume of works that will help define general principles of symbiosis within a new conceptual framework, in the road to finally establish symbiology as an overdue central discipline of biological science.

*Strategic Management* Oct 23 2019 Examine the most thorough, up-to-date, and relevant collection of strategic management cases available in this market-leading, comprehensive case text. Developed by highly respected experts Hitt, Ireland and Hoskisson, STRATEGIC MANAGEMENT: COMPETITIVENESS AND GLOBALIZATION, CASES, 9E combines the latest cutting-edge research in strategic management with a practical global focus. A selection of 30 all-new, compelling cases examines a broad range of critical strategic management issues confronting managers today in U.S. as well as global organizations. Many of these timely cases provide full financial data. Count on this engaging book for the practical understanding you need to apply strategic management tools and techniques for increased performance and a strong competitive advantage.

**Essentials of Business Research Methods**

Jun 11 2021 In an era of big data and data analytics, how can managers make decisions based on almost unlimited information, not to mention hiring and retaining individuals with the required data analytics skills? The new fourth edition of Essentials of Business Research Methods explains research methods and analytical techniques for individuals who

aren't data scientists. The authors offer a straightforward, hands-on approach to the vital managerial process of gathering and using data to make relevant and timely business decisions. They include critical topics, such as the increasing role of online research, ethical issues, privacy matters, data analytics, customer relationship management, how to conduct information-gathering activities more effectively in a rapidly changing business environment, and more. This is also the only text that includes a chapter on qualitative data analysis, and the coverage of quantitative data analysis is more extensive as well as much easier to understand than in other texts. A realistic continuing case used throughout the book, applied research examples, and ethical dilemma mini cases enable upper-level undergraduate and postgraduate students to see how business research information is used in the real world. This comprehensive textbook is supported by a range of online resources, including instructors' manuals, PowerPoint slides, and test banks.

**Pharmaceutical Formulation Design** Dec 17 2021 Pharmaceutical formulations have evolved from simple and traditional systems to more modern and complex novel dosage forms. Formulation development is a tedious process and requires an enormous amount of effort from many different people. Developing a stable novel dosage form and further targeting it to the desired site inside the body has always been a challenge. The purpose of this book is to bring together scholarly articles that highlight recent developments and trends in pharmaceutical formulation science. Each article has been written by authors specializing in the subject area and hailing from top institutions around the world. The book has been written in a systematic and lucid style explaining all basic concepts and fundamentals in a very simple way. This book aims to serve the need of all individuals involved at any level in the pharmaceutical dosage form development. I sincerely hope that the book will be liked by inquisitive students and learned colleagues.

*Strategic Management Cases* Aug 21 2019 This seventh edition case book includes 30 All New Cases with an effective mix of U.S. and international organizations that involve many different strategic issues. Selected personally by the text authors, this unique case selection has been reviewed carefully. Consistent with the nature of strategic issues, the cases included in this book are multidimensional in nature. Because of this, and for readers' convenience, a matrix listing all cases and the dimensions/characteristics of each one is provided at the beginning of the text. Furthermore, the matrix lists each chapter in the main textbook, STRATEGIC MANAGEMENT: COMPETITIVENESS AND GLOBALIZATION 7e, that provides the best fit

for teaching that particular case. While most of the cases are concerned with well-known national and international companies, several examine the strategic challenges experienced in smaller and entrepreneurial firms. As shown by the cases, strategic issues surface for firms competing, for example, in high technology, manufacturing, service, consumer goods, and industrial goods industries. We have also include cases that illustrate characteristics of the industry in which a particular focal firm or organization competes. Many of the cases have enhanced financial analyses as part of the cases notes. A CD-ROM intended for students and packaged with this text includes financial analysis and helps guide students through that aspect of approaching a case. Recent Advances in Optimization and its Applications in Engineering Apr 21 2022

Mathematical optimization encompasses both a rich and rapidly evolving body of fundamental theory, and a variety of exciting applications in science and engineering. The present book contains a careful selection of articles on recent advances in optimization theory, numerical methods, and their applications in engineering. It features in particular new methods and applications in the fields of optimal control,

PDE-constrained optimization, nonlinear optimization, and convex optimization. The authors of this volume took part in the 14th Belgian-French-German Conference on Optimization (BFG09) organized in Leuven, Belgium, on September 14-18, 2009. The volume contains a selection of reviewed articles contributed by the conference speakers as well as three survey articles by plenary speakers and two papers authored by the winners of the best talk and best poster prizes awarded at BFG09. Researchers and graduate students in applied mathematics, computer science, and many branches of engineering will find in this book an interesting and useful collection of recent ideas on the methods and applications of optimization.

**Recent Advances of Epigenetics in Crop Biotechnology** Feb 19 2022

Epigenetics is a new field that explains gene expression at the chromatin structure and organization level. Three principal epigenetic mechanisms are known and hundreds of combinations among them can develop different phenotypic characteristics. DNA methylation, histone modifications and small RNAs have been identified, and their functions are being studied in order to understand the mechanisms of interaction and regulation among the different biological processes in plants. Although, fundamental epigenetic mechanisms in crop plants are beginning to be elucidated, the comprehension of the different epigenetic mechanisms, by which plant gene regulation and phenotype are modified, is a major topic to develop in the near future in order to increase crop productivity. Thus, the importance of epigenetics in improving crop productivity is undoubtedly growing. Current research on epigenetics suggest that DNA methylation, histone modifications and small RNAs are involved in almost every aspect of plant life including agronomically important traits such as flowering time, fruit development, responses to environmental factors, defense response and plant growth. The aim of this Research Topic is to explore the recent advances concerning the role of epigenetics in crop biotechnology, as well as to enhance and promote interactions among high quality researchers from different disciplines such as genetics, cell biology, pathology, microbiology, and evolutionary biology in order to join forces and decipher the epigenetic mechanisms in crop productivity.

**Accounting, the Social and the Political**

Nov 23 2019 This book contains 35 carefully selected and abridged versions of scholarly financial and managerial research articles by world-class researchers ranging across a wide spectrum of the social, political and philosophical sides of financial and managerial accounting information and practices to focus on accounting's wider role and impact on organizations and society at large. While each article was substantially culled in order to highlight its central findings and its unique approach, care was exercised to maintain the integrity of the authors' work. The result is a collection of readily accessible research including: classics and seminal articles, a selection of more contemporary articles, and recent articles that go beyond the conventional. Thus, the book pushes the boundaries beyond that of conventional accounting thought and

research. This anthology will be of interest especially to graduate students since it provides a broad sampling of influential research studies presented in a highly accessible format. It should also be of vital interest to sophisticated practitioners who are concerned about the current state of the accounting world in the wake of the recent cascade of so-called "accounting scandals". The hope also is to help bridge the gap between the practitioners' and the scholarly researchers' Worlds.

**Recent Trends in Mechatronics Towards Industry 4.0** Jan 18 2022 This book presents part of the iM3F 2020 proceedings from the Mechatronics track. It highlights key challenges and recent trends in mechatronics engineering and technology that are non-trivial in the age of Industry 4.0. It discusses

traditional as well as modern solutions that are employed in the multitude spectra of mechatronics-based applications. The readers are expected to gain an insightful view on the current trends, issues, mitigating factors as well as solutions from this book.

Lithium-Ion Batteries May 10 2021 This is the first machine-generated scientific book in chemistry published by Springer Nature. Serving as an innovative prototype defining the current status of the technology, it also provides an overview about the latest trends of lithium-ion batteries research. This book explores future ways of informing researchers and professionals. State-of-the-art computer algorithms were applied to: select relevant sources from Springer Nature publications, arrange these in a topical order, and provide succinct summaries of these articles. The result is a cross-corpora auto-summarization of current texts, organized by means of a

similarity-based clustering routine in coherent chapters and sections. This book summarizes more than 150 research articles published from 2016 to 2018 and provides an informative and concise overview of recent research into anode and cathode materials as well as further aspects such as separators, polymer electrolytes, thermal behavior and modelling. With this prototype, Springer Nature has begun an innovative journey to explore the field of machine-generated content and to find answers to the manifold questions on this fascinating topic. Therefore it was intentionally decided not to manually polish or copy-edit any of the texts so as to highlight the current status and remaining boundaries of machine-generated content. Our goal is to initiate a broad discussion, together with the research community and domain experts, about the future opportunities, challenges and limitations of this technology.
