Designing for the Circular Economy Aug 29 2022 The circular economy describes a world in which reuse through repair, reconditioning and refurbishment is the prevailing social and economic model. The business opportunities are huge but developing product and service offerings and achieving competitive advantage means rethinking your business model from early creativity and design processes, through marketing and communication to pricing and supply. *Designing for the Circular Economy* highlights and explores ‘state of the art’ research and industrial practice, highlighting CE as a source of: new business opportunities; radical business change; disruptive innovation; social change; and new consumer attitudes. The thirty-four chapters provide a comprehensive overview of issues related to product circularity from policy through to design and development. Chapters are designed to be easy to digest and include numerous examples. An important feature of the book is the case studies section that covers a diverse range of topics related to CE, business models and design and development in sectors ranging from construction to retail, clothing, technology and manufacturing. *Designing for the Circular Economy* will inform and educate any companies seeking to move their business models towards these emerging models of sustainability; organizations already working in the circular economy can

benchmark their current activities and draw inspiration from new applications and an understanding of the changing social and political context. This book will appeal to both academia and business with an interest in CE issues related to products, innovation and new business models.

Circular Economy Sep 17 2021 This book highlights the notion of Circular Economy under the umbrella of Sustainability because of the widespread momentum it is gaining. Today the whole world is certainly in emergent need of an alternative system to traditional economy which is linear, i.e. make, use and dispose to get rid-off the waste and very important to ensure continuous use of resources, which is possible by the advent of circular economy. A circular economy aims to utilize the resources in use for as long as possible, extract the maximum value from them during use, then recover and regenerate products and materials at the end of each service life vis-à-vis traditional linear model. This book discusses circular economy in terms of assessment with various case studies.

Repair Mar 31 2020 This book propagates a new way of thinking about managing our resources by integrating the perspectives of complex systems theory and social psychology. By resources, the authors mean objects, such as cell phones and cars, and human resources, such as family members, friends, and the small and large communities they belong to. As we all face the "replace or repair" dichotomy, readers will understand how to repair themselves, their relationships, and communities, accept the "new normal," and contribute to repairing the world. The book is offered to Zoomers, growing up in a world where it seems everything is falling apart; people in their 30s and 40s, who are thinking about how to live a fulfilling life; people from the Boomers generation, who are thinking back on life and how to repair relationships. The Reader will enjoy the intellectual adventure of connecting the natural and social worlds and understanding the transition's pathways from a "throwaway society" to a "repair society."

Mid-Course Correction Revisited Apr 12 2021 The original Mid-Course Correction, published 20 years ago, became a classic in the sustainability field. It put forth a new vision

for what its author, Ray C. Anderson, called the “prototypical company of the 21st century”—a restorative company that does no harm to society or the environment. In it Anderson recounts his eureka moment as founder and leader of Interface, Inc., one of the world’s largest carpet and flooring companies, and one that was doing business in all the usual ways. Bit by bit, he began learning how much environmental destruction companies like his had caused, prompting him to make a radical change. *Mid-Course Correction* not only outlined what eco-centered leadership looks like, it also mapped out a specific set of goals for Anderson’s company to eliminate its environmental footprint. Those goals remain visionary even today, and this second edition delves into how Interface worked toward making them a reality, birthing one of the most innovative and successful corporate sustainability efforts in the world. The new edition also explores why we need to create not only prototypical companies, but also the prototypical economy of the twenty-first century. As our global economy shifts toward sustainability, challenges like building the circular economy and reversing global warming present tremendous opportunities for business and industry. *Mid-Course Correction Revisted* contains a new foreword by Paul Hawken, several new chapters by Ray C. Anderson Foundation executive director John A. Lanier, and interviews with Janine Benyus, Joel Makower, Andrew Winston, Ellen MacArthur and other leaders in green enterprise, the circular economy, and biomimicry. A wide range of business readers—from sustainability professionals to green entrepreneurs to CEOs—will

find both wise advice and concrete examples in this new look at a master in corporate and environmental leadership, and the legacy he left.

Digital Media Ecologies Sep 05 2020 Our digital world is often described using terms such as immateriality and virtuality. The discourse of cloud computing is the latest in a long line of nebulous, dematerialising tropes which have come to dominate how we think about information and communication technologies. Digital Media Ecologies argues that such rhetoric is highly misleading, and that engaging with the key cultural, agential, ethical and political impacts of contemporary media requires that we do not just engage with the surface level of content encountered by the end users of digital media, but that we must additionally consider the affordances of software and hardware. Whilst numerous existing approaches explore content, software and hardware individually, Digital Media Ecologies provides a critical intervention by insisting that addressing contemporary technoculture requires a synthetic approach that traverses these three registers. Digital Media Ecologies re-envision the methodological approach of media ecology to go beyond the metaphor of a symbolic information environment that exists alongside a material world of tantalum, turtles and tornados. It illustrates the social, cultural, political and environmental impacts of

contemporary media assemblages through examples that include mining conflict-sustaining minerals, climate change blogging, iOS jailbreaking, and the ecological footprint of contemporary computing infrastructures. Alongside foregrounding the deleterious social and environmental impacts of digital technologies, the book considers numerous ways that these issues are being tackled by a heterogeneous array of activists, academics, hackers, scientists and citizens using the same technological assemblages that ostensibly cause these problems.

The Right to Repair Oct 19 2021 In recent decades, companies around the world have deployed an arsenal of tools - including IP law, hardware design, software restrictions, pricing strategies, and marketing messages - to prevent consumers from fixing the things they own. While this strategy has enriched companies almost beyond measure, it has taken billions of dollars out of the pockets of consumers and imposed massive environmental costs on the planet. In *The Right to Repair*, Aaron Perzanowski analyzes the history of repair to show how we've arrived at this moment, when a battle over repair is being waged - largely unnoticed - in courtrooms, legislatures, and administrative agencies. With deft, lucid prose, Perzanowski explains the opaque and complex legal landscape that surrounds the right to repair and shows readers how to fight back.

Repair Manual for Uncle Sam and America Jun 14 2021 The Repair Manual for Uncle Sam and America is written to cut through the infinite mass of psycho-babble that has been thrown at the American people for decades. Thousands of books and articles have been written to analyze our problems, yet with all that verbiage we have not fixed anything. Today we are broke and in debt, we have wasted our wealth on needless wars, our drug problems have not abated, our prisons are overcrowded, illegals mooch off our system, our health care system is broke along with our Social Security, we are in trouble and there is no more American Dream. Our government does not understand globalization and we are loosing jobs because of it. Our politicians are stalemated along party lines and nothing is done to benefit the people. This Repair Manual points out our greatest dangers and offers simple rational, logical solutions to fix the problems. At one time America had a great

world image, a great economy, it was a land of opportunity for everyone, where is all that now? Today we must start to fix it, restore it because the road we are on today will lead to anarchy and then to a totalitarian socialist state. Americans must become informed and involved in our political system because without their help our politicians will take us down the same path we are on, leading down

Pioneers, Leaders and Followers in Multilevel and Polycentric Climate Governance Jun 22 2019 Pioneers, Leaders and Followers in Multilevel and Polycentric Climate Governance

focuses on pioneers, leaders and followers as central drivers for international climate change governance innovations. A burgeoning literature has identified pioneers and leaders as central drivers for international climate change governance innovations. A wide range of actors (such as international organisations, the European Union, NGOs, corporations and cities) have been identified as potential and actual climate pioneers and/or leaders. Despite this, much of the academic debate is still largely focused on states. To address this research gap, this volume focuses primarily on non-state actors in different multilevel and polycentric governance structures. The chapters offer a critical analysis of the different types of actors (e.g. the EU, corporate actors, NGOs and cities) who can act as pioneers and/or leaders at different levels of climate governance (including the international, supranational, regional, national and local) encompassing non-state and state actors. The volume provides a clear conceptualisation of pioneers, leaders and followers while assessing their motives, capacities, styles and strategies. It examines critically the dynamic interrelationship between leaders and pioneers on the one hand, and followers and laggards on the other. Moreover, it analyses how multilevel and polycentric climate governance structures enable and/or constrain climate pioneers, leaders and followers. This volume will be of great use to scholars of environmental governance, climate change, and international governance. The chapters were originally published as a special issue in *Environmental Politics*.
