Through a variety of exercises and extensive readings, the text teaches students to read carefully and summarize accurately, to recognize and respond to specific points in the material they have read, to synthesize ideas from several reading selections, and to evaluate and argue about the ideas they have found in their reading material. Although the authors' focus is on writing about reading, they also encourage students to use their personal experiences to develop and support their ideas. This combination results in a text that not only imparts the fundamentals of college-level writing, but also helps each student find his or her own voice—and discover that they do, indeed, have something to say. Writing-Intensive Jul 16 2021 In one of the few book-length studies of a major post-secondary writing-across-the-curriculum initiative from concept to implementation, Writing-Intensive traces the process of preparation for new writing requirements across the undergraduate curriculum at Simon Fraser University, a mid-sized Canadian research university. As faculty members across campus were selected to pilot writing-intensive courses, and as administrators and committees adjusted the process toward full implementation, planners grounded their pedagogy in genre theory—a new approach for many non-composition faculty. So doing, the initiative aimed to establish a coherent yet rhetorically flexible framework through which students might improve their writing in all disciplines. Wendy Strachan documents this campus cultural transformation, exploring successes and impasses with equal interest. The study identifies factors to be considered to avoid isolating the teaching of writing in writing-intensive courses; to engender a university-wide culture that naturalizes writing as a vital part of learning across all disciplines; and to keep the teaching of writing organic and reflected upon in a scholarly manner across campus. A valuable case history for scholars in writing studies, WAC/WID, and curricular change studies.

The text explores techniques for teaching critical thinking, qualitative and quantitative reasoning, written and oral communication, information and technology literacy, and collaboration and teamwork. The authors explain how to envision the learning objectives teachers want their students to achieve and advise how to select assessments to evaluate if the learning objectives are being met.
